DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, 6-8 and 14-16, drawn to a hydrogen-containing unit, classified in class 422, subclass 220, 222.
 - II. Claims 5, 9-13 and 17-38, drawn to a hydrogen fuel source, classified in class 422, subclass 190.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions are not connected in design, operation, or effect and therefore the facts relied on for this conclusion are in essence the reasons for insisting upon restriction.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification above, their recognized divergent subject matter, and the search required for Group I not required for Group II, restriction for examination purposes as indicated is proper.

2. If Group I is selected, restriction to one of the following inventions is required under 35 U.S.C. 121:

- IA. Claims 1-4, drawn to drawn to a hydrogen containing unit comprising a wick and a layer of hydrogen-containing material, classified in class 422, subclass 222.
- IB. Claims 6-8 and 14-16, drawn to a hydrogen containing unit comprising a disc of

hydrogen-containing material defining a central orifice and a reactant distribution structure, classified in class 422, subclass 220.

Inventions IA and IB are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions are not connected in design, operation, or effect and therefore the facts relied on for this conclusion are in essence the reasons for insisting upon restriction.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification above, their recognized divergent subject matter, and the search required for Group IA not required for Group IB, restriction for examination purposes as indicated is proper.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
